gvSIG build:	2049	Add-on resolve version:	
Operative System:	Linux	Add-on resolve build:	
Keywords:		Proyecto:	
Has patch:	No	Hito:	
Add-on name:	Unknown		

Description

Open gvSIG
Open new View
Add layer (/geodata/vector/SHP2D/hidro_andalucia/hidro_andalucia.shp)
Click in buffer tool from geoprocess
Choose the Input cover, hidro_andalucia.shp
Save the dissolve in a temporary file
Click Ok
Click cancel button in the new pop up window (This pop up has a fast expire, then hurry up to click cancel button to stop the process)
The problem is after the process stop it create a buffer layer with some elements, I think if we cancel the process it is because we don't want the result and it should not create any layer
