Has patch:	No	**Hito:**	
Add-on name:	Unknown		

Description

Open gvSIG

Open new View

Add layer (/geodata/vector/SHP2D/hidro_andalucia/hidro_andalucia.shp)

Click in dissolve tool from geoprocess

Choose as Input cover hidro_andalucia.shp

Select JERAQUIA as Field

Save the dissolve in a temporary file

Click Ok

Click cancel button in the new pop up window (This pop up has a fast expire, then hurry up to click cancel button to stop the process)

The problem is after the process stop, it creates a dissolve layer with some elements, I think if we cancel the process it is because we don't want the result and it should not create any layer
