Description

Open gvSIG

Open new View

Add layer (/geodata/vector/SHP2D/provincias_andalucia/provincias_andalucia.shp)

Add layer (/geodata/vector/SHP2D/urb_andalucia/urb_andalucia.shp)

Click on merge tool from geoprocess

Activate both checkbox layers: provincias_andalucia.shp and urb_andalucia.shp

Select urb_andalucia.shp as Field

Save the merge in a temporary file

Click Ok

Click cancel button in the new pop up window (This pop up has a fast expire, then hurry up to click cancel button to stop the process)

The problem is after the process stop, it creates a merge layer with some elements, I think if we cancel the process it is because we don't want the result and it should not create any layer
