Description

Open gvSIG

Open new View

Add layer (/geodata/vector/SHP2D/hidro_andalucia/hidro_andalucia.shp)

Add layer (/geodata/vector/SHP2D/comunicaciones_andalucia/comunicaciones_andalucia.shp)

Click in Union tool from geoprocess

Choose as Input cover 1 hidro_andalucia.shp

Choose as Input cover 2 comunicaciones_andalucia.shp

Save the Union in a temporary files

Click Ok

Click cancel button in the new pop up window (This pop up has a fast expire, then hurry up to click cancel button to stop the process)

The problem is after the process stop, it creates a Union layers with some elements, I think if we cancel the process it is because we don't want the result and it should not create any layer
