Has patch:	No	Hito:	
Add-on name:	Unknown		

**Description**

Open gvSIG  
Open new View  
Add layer esp\_comaut.shp ([http://downloads.gvsig.org/download/geodata/vector/SHP2D/esp\\_comaut/esp\\_comaut.shp](http://downloads.gvsig.org/download/geodata/vector/SHP2D/esp_comaut/esp_comaut.shp))  
Click on Fuse spatially t tool from geoprocess  
Choose as Input cover esp\_comaut.shp  
Save the Fuse spatially in a temporary file  
Click Ok  
Click cancel button in the new pop up window (This pop up has a fast expire, then hurry up to click cancel button to stop the process)  
The problem is after the process stop, it creates a Fuse spatially layer with the result, I think if we cancel the process it is because we don't want the result and it should not create any layer
