- Status changed from New to Fixed

This is actually the same bug as #1317 so it should now be fixed in gvsig-desktop:r39101

Test: the steps described should work now. You can use for example

https://downloads.gvsig.org/download/geodata/vector/DWG/Albarracin1_SITAR_DWG.zip

If there are not problems, the geometries can be divided, for example the file "file_points.shp" has 20% of the original geometries and "file_lines.shp" has the rest (80%) because the original file had mixed geometry types.
