

Application: gvSIG desktop - gvSIG bugs #1365

Does not persist the prefix of the first table after a Join of two tables

11/08/2012 02:03 PM - Vicent Domenech

Status:	Closed	% Done:	0%
Priority:	Urgent	Spent time:	0.00 hour
Assignee:	Juan Lucas Domínguez		
Category:	Document table		
Target version:	2.0.0-rc1		
Severity:		Add-on version:	
gvSIG version:	2.0.0	Add-on build:	
gvSIG build:	2057	Add-on resolve version:	
Operative System:	Linux	Add-on resolve build:	
Keywords:		Proyecto:	
Has patch:	No	Hito:	
Add-on name:	Unknown		
Description			
Open gvSIG			
New table			
Add table rrline.dbf (http://downloads.gvsig.org/download/geodata/tables/DBF/rrline.dbf.zip)			
Add table rrline_filipinas.dbf (http://downloads.gvsig.org/download/geodata/tables/DBF/rrline_filipinas.dbf.zip)			
Table, create join			
Choose a data store as "rrline.dbf" and click Next			
Choose the second data store as "rrline_filipinas.dbf" and click Next			
Choose as key of first table "rrlntype.shp", the key of second table "rrlntype.shp", type of prefix for the first table: 1, type of prefix for the second table: 2 and "userid" as the attribute to join. Next and finish.			
Now we see the fields of rrline.dbf with the prefix 1 and the fields of rrline_filipinas with the prefix 2 on the new rrline.dbf			
Save the project			
Close gvSIG			
Open gvSIG			
Load last gvSIG project			
Check the prefix of rrlntype.dbf (1) does not persist			

History

#1 - 11/12/2012 12:40 PM - Juan Lucas Domínguez

- Assignee set to Juan Lucas Domínguez

#2 - 11/12/2012 12:43 PM - Juan Lucas Domínguez

- Status changed from New to Fixed

Fixed load-from-state method (persistence).

gvsig-desktop:r39213

Test: the steps described should now work.

#3 - 11/15/2012 09:43 AM - María Maluenda

- Status changed from Fixed to Closed
