#### Description

FieldDescription (length and decimal count) of numeric dissolve field is lost. In detail, if the dissolve field in the input layer is of integer type, then it becomes of double type. This issue causes the impossibility to eventually join a dissolved layer with other layers or tables using the dissolve field as key. The patch in attachment fix this bug and works without the need to apply the patches provided in the following tickets: #1530, #1531 and #1533.

Cheers,  
Antonio
