Description

Originally reported by Raúl Casado in the [mailing list](#)

I checked it on linux, gvSIG 1.11 build 1305 and on gvSIG 1.12 build 1417 and it crashes in both cases.

The crash happens in the constructor of the class org.gvsig.raster.dataset.io.ErMapperDriver, in the line:

```
file = new JNCSFile(((String)param), false);
```

This message is printed in the console:

```
terminate called after throwing an instance of 'std::length_error'  
what(): basic_string::_S_create
```
