Description

1. Load a vector polygon layer.
2. Start editing.
3. Add a new column (type=string length=100).
4. Choose a polygon and fill in the cell of the new column with an URL ("http://www.google.com" e.g.).
5. Stop editing saving changes.
6. Configure a layer hyperlink (right button + Properties > Hyperlink tab) for the new column/field (html-text type).
7. Select the hyperlink tool from the toolbar.
8. Click on the polygon that has the URL.
9. Check as the visualization of the web page is not correct. Colors and text position are different than shown in a web browser.

We cannot do much about this. The HTML option is intended for simple HTML or TXT files. Modern websites perhaps are not visualized correctly because the HTML browser has limited capabilities.

Creo que deberíamos lanzar el navegador externo en lugar de intentar mostrarlo en la aplicación, o preguntarle al usuario.
