Description	
In gvSIG 1.X we have two strategies:	
- Add layer on top always	
- Keep the order: Raster-polygon-line-point

History

#1 - 09/17/2013 04:12 PM - Juan Lucas Domínguez

- Status changed from New to Fixed

Relevant changes in this commit:

Added LayerOrderManager interface; Added "orderManager" field in MapContext class (so it is persisted); FLayers objects will use the order manager of their MapContext; Added methods to MapContextLocator to register order managers; Added two implementations in "mapcontext.impl"; Added layer order preferences page; Current order manager is persisted in main plugin persistence; Layer order manager is set when a new view is created and cannot be changed, so you can have views with different order managers.
