Add-on name:	Unknown		

Description

1-Open a raster layer

2-Draw some regions of interest of just one geometry type

3-Save this ROI in a file without shp extension

4-Close the ROI dialog

5-Remove the layer from the TOC

6-Load the layer again

7-Open the ROI dialog

It throws a error message

History

- Status changed from New to Fixed

A ROI can be saved in only one file or in three files. It depends on the geometry types. For ROI with lines, points and polygons it will be necesary three shape files.

If just one file is used then the user can save with or without .shp extension. The plugin always will add the .shp to save the file, but the link in the RMF file will be saved without .shp.
