Description

After installing gvSIG 2.1.0 BN2205 using the following online installer executable:

http://downloads.gvsig.org/download/gvsig-desktop/dists/2.1.0/builds/2205/gvSIG-desktop-2.1.0-2205-devel-win-x86-online.exe

gvSIG is not executed at all and no gvSIG.log is generated.

More in detail, the installer shows that is installing gvSIG base, then the Addons manager is not shown as usual and the setup ends prematurely. The desktop icon is blank and points to the gvSIG-desktop.exe correctly. Finally, double clicking on the desktop icon or the gvSIG-desktop.exe doesn't execute gvSIG at all.

I have also tried with the zipped version:

http://downloads.gvsig.org/download/gvsig-desktop/dists/2.1.0/builds/2205/gvSIG-desktop-2.1.0-2205-devel-all-x86-online.zip

but gvSIG is not executed again. So the issue seems to depend by gvsig-desktop.exe which doesn't find the JRE.

History

UPDATE

I tested all the following installers:

- gvSIG-desktop-2.1.0-2205-devel-all-x86-online.zip
- gvSIG-desktop-2.1.0-2205-devel-win-x86-online.exe
- gvSIG-desktop-2.1.0-2205-devel-win-x86-standard-withjre.exe
- gvSIG-desktop-2.1.0-2205-devel-win-x86-standard.exe

Final results are:

- the Addons Manager is not executed in three exe installers;
- gvSIG-desktop.exe is not executed with all the four installers.

That's all. Thanks for your kind attention.

Hi Antonio.

Thank you very much for this deep testing. We found a bug in the installer of the build 2205. There is a clash between the basic crs and the JCRS plugins. As a result the installation is corrupted and it is no possible to run gvSIG properly.

As a temporary measure (while we are able to fix the bug) we took the JCRS plugin off the distribution and re-generated the build 2205 selecting the basic CRS plugin as the default CRS plugin.

We just updated it in the download site so if you want to give it a try, just download it again. We would appreciate any feedback. Just take into account that re-projection tools are not the usual ones.

Thanks,
Manuel.

Hi Manuel,

I have tried with the updated installers, but unfortunately the issue persists as described before.

This is the content of the *extensiones* folder:

- jre_6_windows_i586
- org.gvsig.app.mainplugin
- org.gvsig.coreplugin.app.mainplugin
- org.gvsig.i18n.app.mainplugin
- org.gvsig.installer.app.mainplugin

Where is the default CRS plugin?

Cheers,
Antonio

Can you try with build 2216?

http://downloads.gvsig.org/download/gvsig-desktop/dists/2.1.0/builds/2216/

Thanks!

I've just tried with the BN 2217 and it works. The issue has been solved, so I close the ticket. Thanks.
