**Description**

When symbology by unique values is selected, there's always a Colour scheme by default (every computer has a different colour scheme, it's the first one of the combo box), and most of the times it only contains a few colours (not a wide variety), so they are repeated a lot of times.

It would be interesting to have a Colour scheme by default with a wide variety of colours. If it can be created it can contains 256 colours. If only one of the existing ones can be selected, it can be "ocean", "plasma" or "hardcandy".
