Severity:		Add-on version:	
gvSIG version:	2.1.0	Add-on build:	
gvSIG build:	2220	Add-on resolve version:	
Operative System:	Windows	Add-on resolve build:	
Keywords:		Proyecto:	
Has patch:	No	Hito:	
Add-on name:	Unknown		

Description

During the installation of build 2220 - online version [1], the "Standard installation" option is not active in Select installation source. So I'm obliged to choose the "Installation from URL". Then if I choose the Typical installation mode and click on Next button, the installer does nothing. Instead, if I choose the Advanced installation mode there are only three available packages (see screenshot in attachment). The installation is evidently incomplete and so this build cannot be tested at the moment.

- Status changed from New to Invalid

The 2220 is not finished, we are working on it. Don't try it until tomorrow.

:-)

Ok, Alvaro. But if build 2220 is not finished, why does it seem to be already published? :(

I suggest you to freeze/hide this build until it's not finished in order to lose no time all together.
