#### History

##### #1 - 02/24/2014 12:20 PM - Álvaro Anguix

- Assignee set to Ignacio Brodín
- Target version set to 2.1.0-2221-testing
- gvSIG build set to 2220

##### #2 - 02/24/2014 03:31 PM - Ignacio Brodín

- Status changed from New to Awaiting response

The error that shows gvSIG.log does not have anything to do with the legend. On the other hand, exists a known problem with legends with grouped layers and a the feature request was opened here:

<https://devel.gvsig.org/redmine/issues/1583>

Could you set here the steps to reproduce the error?

##### #3 - 02/24/2014 03:44 PM - Mario Carrera

- File wmsGetLegendGraphic13932528285483 added

The steps are the following:

- Connect to this WMS layer: [http://cartoweb.cma.gva.es/arcgis/services/espacios\\_protegidos/MapServer/WMS/Server](http://cartoweb.cma.gva.es/arcgis/services/espacios_protegidos/MapServer/WMS/Server)
- Load "ZEPAs" and "Paisajes protegidos" layers, in jpeg format and 23030 (it happens when 2 layers are losded in the same WMS layer).

They are loaded but the legend doesn't appear in the TOC. I attach the file extracted from tmp-andami, that is indicated at the console.

**#4 - 02/24/2014 04:07 PM - Álvaro Anguix**

- Status changed from *Awaiting response* to *Invalid*

Como dice Nacho está registrado como FRequest, ya que realmente no arroja ningún error..  
Paso este a invalido al estar duplicado.
