### Description

When we open a project that contains a point or multipoint layer with symbology by image, that layer is not loaded (it's in the TOC but with an error).

If the project is saved after that we get a new error.

I attach the gvSIG.log file.

### History

#### #1 - 02/24/2014 01:39 PM - Álvaro Anguix

- Description updated
- Category set to Application
- Assignee set to Juan Lucas Domínguez
- Priority changed from Normal to Immediate
- Target version set to 2.1.0-2221-testing
- gvSIG build set to 2220

#### #2 - 02/24/2014 01:47 PM - Mario Carrera

- File proyecto1.gvsproj added

After opening that project and getting the error with the symbology by image I tried to save the project again, but I got an error. The project can't be opened again. I attach the gvsproj in case it's related to the error.

#### #3 - 02/25/2014 10:39 AM - Juan Lucas Domínguez

- Status changed from New to Fixed

Fixed method to "de-relativize" the file path. The image file path is persisted as a relative path assuming that the base folder is the project folder.

gvSIG-tools:r998

#### #4 - 03/10/2014 09:44 AM - Álvaro Anguix

- Status changed from Fixed to Closed
