Description

In order to reproduce this error, simply open and close gvSIG. In detail, it happens every time gvSIG application is closed and consequently there are a lot of temporary cached database folders. Here's the error:

```

note: check and attach a list of gvSIG\plugins\org.gvsig.projection.app.jcrs\db (user home) and .log

Only to say that the contents of my `gvSIG\plugins\org.gvsig.projection.app.jcrs\db` folder is quite huge at the moment (>1 GB). IMHO this is a serious issue, because some unexperienced users or someone with old PCs could have problems with their hard disks.

He añadido código para que cuando se consulte un CRS a través de `CRSFactory.getCRS` se cierren las conexiones a la BBDD. Tal como estaba no se cerraban nunca y es fácil que esa fuese una de las causas que provocaban que en Windows no se pudiese borrar la BBDD a la salida de la aplicación.

Lo que no se es si desde algún otro sitio se estará abriendo la BBDD y se quedara abierta, abra que esperar a probarlo en Windows a ver que hace.

Para el próximo build voy a dejar las trazas de `jCRS` activadas para poder ver que es lo que dice.

Los cambios están en la revisión 229 y 230 del proyecto de `gvsig-jcrs`.

Paco ha estado probando los cambios y comenta que funciona y que puede pasarse a *fixed*.

Cambio el estado.

It seems that the fix doesn't work with a fresh install of BN2229, so I have to reopen the ticket. I attach a new log file.
