Description

Hello,

When I'm trying to add data from Postgis database no tables appear to choose from (see attached 2222 pic, it's gvSIG 2.1.2222 I'm using).

When I try to add the PostGIS layer using the same server and database in gvSIG 1.12, it creates a table on db so it's not a connection issue.

Could you please have a look?

Thanks,

Svetlana
