Description

When the Preferences window is opened and then closed without doing anything, a Persistence error appears. It seems it's related to Color tables. I attach the log file.

If I open gvSIG from console, the message is:

```

Añadir que aunque aparece en la barra de estado el error, a priori permite seguir funcionando de forma normal.

Recordar que en gvSIG 2.1 hay herramientas en menú Tools/Development/Show persistence factories para detectar alertas para los temas de persistencia y de cara a la final deberíamos intentar tener esto controlado
