gvSIG build:	2228	**Add-on resolve version:**	
Operative System:	Windows	**Add-on resolve build:**	
Keywords:	join, transformation, wizard	**Proyecto:**	
Has patch:	No	**Hito:**	
Add-on name:	Unknown		

Description

If I try to create a join between two tables, comboboxes and textboxes collapse in one row in the "Apply a transform" wizard after clicking on the "Back" button.

Steps in order to reproduce this bug:

1. add two vector layers with a common field in their attribute tables;
2. click on the "Create join" button;
3. choose the first data store and click on the "Next" button;
4. choose the second data store and click on the "Next" button;
5. select the transformation parameters and then click on the "Next" button (see BEFORE image in the screenshot);
6. click on the "Back" button and the issue happens (see AFTER image in the screenshot).
