Description			
<p>When somebody developes a new gvSIG plugin, currently it is not possible to directly specify the value of the download-url property which comes in the metadata file of the new plugin, in the pom file. Instead, we have to specify a property poolURL which is used as a base to build the URL of the "download-url" item. However, in some cases it is not possible to build it that way as we don't have permissions to organize the files at the destiny website.</p> <p>Thus, it would be interesting to add a "gvsig.package.info.downloadurl" property within the pom file and modify the "build-package-info" execution of the "gmaven-plugin" plugin within the pom file of the "org.gvsig.desktop" project in a similar way to this:</p> <p>https://redmine.gvsig.net/redmine/projects/gvsig-jexcel/repository/revisions/7/entry/org.gvsig.jexcel/trunk/org.gvsig.jexcel/org.gvsig.jexcel.app/org.gvsig.jexcel.app.mainplugin/pom.xml</p>
