Has patch:		Hito:	
Add-on name:	Unknown		

Description

Steps in order to reproduce this bug:

- create a random point layer;
- open its attribute table;
- open the attribute table properties, activate the GEOMETRY field and apply it;
- open the attribute table again and resize on both direction the width of the GEOMETRY column manually.

Result: the row header height is not the same of cells.

In gvSIG 2438 it seems that works fine.

It works fine because fortunately the GEOMETRY field was removed from attribute table! ;)
