Description

We load the only layer of this WFS server:

http://fbinter.stadt-berlin.de/fb/wfs/geometry/senstadt/re_nutz2010_grz?REQUEST=GetCapabilities&SERVICE=WFS&VERSION=1.1.0

(sometimes it loads the elements but the most of times any element is loaded, and they always take long time in being loaded).

If the elements are loaded, we select some of them, and we export them to a shapefile. We select the name of the output file. An error appears saying that the output file can't be found (but it's the file that we are creating).

In gvSIG 1.12 it's loaded quickly, and the export is done without problem.

I've tried to reproduce it again in gvSIG 2.1 to attach the log file but now any element is loaded at the WFS layer, it's always empty.

History
