Description

Testing the *gvSIG-desktop-2.3.0-2404-devel-win-x86_64-online.jar* installer, I have found that BusyBox crashes when gvSIG.sh is executed. The reason seems to be explained in the CLI:

    gvSIG.sh: trap: line 38: ERR: invalid signal specification

But substituting ERR with e.g. SIGALRM, it crashes the same. Instead, commenting line 184:

    #setPreferedArchitecture

gvSIG.sh is executed without any apparent problems.

History

- Status changed from New to Closed

BusyBox doesn't crash anymore in build 2405, so I close the ticket.
