Description

Before connecting any WFS the system displays an error message:

"Some parameters found in the URL may cause issues. Proceed ..."

WFS have problem displaying some layers:
- from this WFS: http://sdi.provincia.bz.it/geoserver/inspire/wfs?service=wfs&version=1.1.0&request=GetCapabilities
- select MTB_Routen
- select version 1.1.0 and EPSG:25832
it seems to work but nothing will be displayed

This problems are the same for the version 2.2 final and 2.3.0-2419 both in linux and windows

The *MTB_Routen* layer is displayed in build 2836, but not visualized correctly. Silvia, can you confirm this?
Instead, other layers like *Administrative boundary* are loaded and visualized without problems.

I can confirm that the layer still can be selected but it is not visualized at all... I can not see any errore to even in the Console.

#7 - 09/11/2017 12:11 PM - Antonio Falciano

- Target version set to 2.4.0-2850-final (rev. org.gvsig.desktop-2.0.220)

- File MTB_Routen.png added

- File AdministrativeBoundary.png added

Silvia, I attach two screenshots respectively of AdministrativeBoundary (ok) and MTB_Routen (odd visualization) layers in build 2836 (Windows 7 64 bits):
