Description

If you have a layer of multipoint (for example) the tool to add geometry attributes (coordinates of the points) to the attributes table is not active in the Table menu.

- Status changed from New to Invalid

Hi Silvia,

this is not a bug. Your ticket is a duplicate of #4057, so it can be considered as invalid for the same reason: if the layer is of multigeometry type, there's a one-to-many relationship between the record and the single geometries. For instance, in the case of multipoint layer, the coordinates of points could not be unique.
