Keywords:		**Proyecto:**	
Has patch:		**Hito:**	
Add-on name:	Unknown		

Description

The initialization of the scripting engines is not a startup task (like in gvSIG 2.2), but it happens only when there's the need to execute a script for the first time (e.g. an autorun script, if available). So the user has to wait some seconds before the execution of the first script.

Related to #4025.
