Add-on name:	Unknown		

Description

1. Create a map including several rectangles.

2. Save the map as template.

3. Create a new gvSIG project.

4. Open the map template previously created.

5. Check that some rectangles have been displaced while other seem to be in the right position but are hidden (you cannot see them but you can select them).

I'm attaching a screen shot showing both displaced and hidden rectangles.

This only happen in Windows.
