Description

El bug puede ser reproducido accediendo a una BBDD poniendo una tabla con geometrías y que tenga PK en edición, añadiendo una geometría de tipo línea y sin terminar sesión de edición intentar borrar la misma geometría que se ha añadido con el botón Supr. Esto hace que se utilice el método equals de DefaultFeatureReference.

Cuando se comparan referencias (método equals en DefaultFeatureReference) en las que la primera tiene pk y la segunda oid da un NullPointerException.
