Hello. Testing steps:

- Start gvSIG

- Open the plugin manager

- Choose "Install from URL" (repo)

- Select the 3 plugins involved (see image attached "install_from_repo.jpg")

- Check they are correctly downloaded and installed.

If the download progress bar stops between 100 and 140 KB then it might be a problem with the downloads server. I have changed target version so it can be tested with next build.
