Description

Reported by "ernesto sferlazza" on the mailing list:

http://listserv.gva.es/pipermail/gvsig_internacional/2012-June/008451.html

Second issue: intersection between a polyline layer with a clone of itself.

No problem using gvSIG 1.11, while using gvSIG 1.12 (build 1411) it appears an error message. The corresponding lines in gvSIG.log are the following:*

```
DEBUG Thread-30 com.iver.andami.messages.NotificationManager -
```

```
java.lang.ClassCastException: es.unex.sextante.gvsig.gui.ToolboxDialog cannot be cast to
```

```
com.iver.cit.gvsig.project.documents.view.gui.View
```

```
at com.iver.cit.gvsig.geoprocess.core.fmap.AbstractGeoprocess.getResult(AbstractGeoprocess.java:201)
```

```
at com.iver.cit.gvsig.geoprocess.core.gui.AddResultLayerTask.run(AddResultLayerTask.java:191)
```

```
at com.iver.utiles.swing.threads.MonitorableDecoratorMainFirst.run(MonitorableDecoratorMainFirst.java:158)
```

```
at com.iver.andami.PluginServices$1.construct(PluginServices.java:405)
```

```
at com.iver.utiles.swing.threads.SwingWorker$2.run(SwingWorker.java:108)
```

```
at java.lang.Thread.run(Unknown Source)*
```

Nevertheless, point and line layers are created in the destination folder, though they are not loaded in the view.

History
